

Cat lifestyle	FVRCP(Distemper/3-way) vaccine schedule	Rabies vaccine schedule	When to schedule spay-neuter surgery	Other vaccines to consider
<i>Pet kitten (less than 8 months old) that lives in a house with other vaccinated cats. No new cats coming into house.</i>	<i>Starting between 6-8 weeks of age, vaccinate with FVRCP every 3-4 weeks until 4-5 months old. Booster again at 1 year of age and then every 3 years thereafter. Optional: give 6 month booster if exposed to unvaccinated cats.</i>	<i>Vaccinate with Rabies vaccine at 12-16 weeks of age. Give a Rabies vaccine booster one year later and then every 3 years thereafter.</i>	<i>Schedule for spay-neuter surgery one week or more after last kitten vaccine.</i>	<i>Feline leukemia vaccine-see your regular full-service veterinarian for this. It is important to start this before 3 months of age in susceptible populations.</i>
<i>Pet adult cat (over 8 months old) that lives in a house with other vaccinated cats. No new unvaccinated cats coming into house.</i>	<i>If never vaccinated, give FVRCP now and repeat in 2-4 weeks. Booster again at 1 year of age and then every 3 years thereafter.</i>	<i>Vaccinate with Rabies vaccine at first appointment. Give a Rabies booster one year later and then every 3 years thereafter.</i>	<i>Schedule for spay-neuter surgery one week or more after booster vaccine.</i>	<i>Feline leukemia vaccine-see your regular full-service veterinarian for this.</i>
<i>Indoor or outdoor cats (or kittens) that are friendly, who may encounter unvaccinated cats.</i>	<i>Adult cat never vaccinated- give FVRCP now and repeat in 2-4 weeks. Booster again at 1 year of age and then every 3 years thereafter. In kittens, vaccinate every 2 weeks until 5 months of age. Optional: give 6 month booster if exposed to unvaccinated cats.</i>	<i>Vaccinate with Rabies vaccine at 12-16 weeks of age. Give a Rabies vaccine booster one year later and then every 3 years thereafter.</i>	<i>Schedule adults one week or more after initial vaccine. Schedule kittens any time after second vaccine and after they weigh at least 2 pounds. Continue and finish the FVRCP series.</i>	<i>Feline leukemia vaccine-see your regular full-service veterinarian for this. It is recommended that all outdoor cats are vaccinated for this.</i>
<i>Outdoor cats that are feral and afraid of humans and cannot be handled.</i>	<i>Purple Cat will not require FVRCP vaccine in feral cat. If you can safely vaccinate the cat while in a live-trap, then do so (TNR experts only). We will vaccinate when sedated for surgery.</i>	<i>Purple Cat Vet can give a Rabies vaccine when sedated for surgery.</i>	<i>As soon as possible.</i>	<i>N/A</i>
<i>Shelter or Rescue cats that are often exposed to unvaccinated cats. Your organization should have quarantine areas that separate vaccinated from unvaccinated cats and also separate sick cats from healthy.</i>	<i>Adult cat never vaccinated-give FVRCP now and repeat in 2-4 weeks. Booster again at 1 year of age and then every 3 years thereafter. In kittens, vaccinate every 2 weeks until 5 months of age. Optional: give 6 month booster if exposed to unvaccinated cats.</i>	<i>Vaccinate with Rabies vaccine at 12-16 weeks of age. Give a Rabies vaccine booster one year later and then every 3 years thereafter.</i>	<i>Schedule adults one week after initial vaccine. Schedule kittens anytime after second vaccine and after they weigh at least 2 pounds. Continue and finish the FVRCP series.</i>	<i>Feline leukemia vaccine-see your regular full-service veterinarian for this.</i>
<i>Bottle babies or babies born to an unvaccinated mamma cat.</i>	<i>Start the FVRCP vaccines at 4 weeks of age. Vaccinate every 2 weeks until 5 months of age. Optional: give 6 month booster if exposed to unvaccinated cats.</i>	<i>Vaccinate with Rabies vaccine at 12-16 weeks of age. Give a Rabies vaccine booster one year later and then every 3 years thereafter.</i>	<i>Schedule kittens any time after second vaccine and after they weigh at least 2 pounds. Continue and finish the FVRCP series.</i>	<i>Feline leukemia vaccine-see your regular full-service veterinarian for this. It is important to start this before 3 months of age in susceptible populations.</i>
