

Cat lifestyle	FVRCP(Distemper/3-way) vaccine schedule <u>REQUIRED FOR SURGERY</u>	Rabies vaccine <u>NOT REQUIRED FOR SURGERY</u>	When to schedule spay-neuter surgery	Other vaccines to consider
Family Owned <u>Pet kitten</u> (less than 8 months old) that lives in a house with other vaccinated cats. No new unvaccinated cats coming into the house.	Starting between 6-8 weeks of age, vaccinate with FVRCP every 2-4 weeks until 4-5 months old. Booster again 1 year later and then every 3 years thereafter. Optional: give 6 month booster if exposed to unvaccinated cats. DO NOT GIVE PREGNANT CATS	Vaccinate with Rabies vaccine at 12-16 weeks of age. Give a Rabies vaccine booster 1 year later and then every 3 years thereafter.	Schedule for spay-neuter surgery at 5-6 months of age. Should spay as early as 5 months of age if exposed to other sexually intact cats. 2 FVRCP vaccines required prior to surgery with one given at 16 weeks of age or later.	-Feline Leukemia -Bordetella -Chlamydia Felis Discuss risk factors with your regular full service veterinarian.
Family Owned <u>Pet adult</u> cat (over 8 months old) that lives in a house with other vaccinated cats. No new unvaccinated cats coming into the house.	If never vaccinated, give FVRCP now and repeat in 2-4 weeks. Booster again 1 year later and then every 3 years thereafter. DO NOT GIVE PREGNANT CATS	Vaccinate with Rabies vaccine at first appointment. Give a Rabies booster 1 year later and then every 3 years thereafter.	Schedule for spay-neuter surgery two weeks or longer after the 2nd vaccine. 2 FVRCP vaccines required prior to surgery.	-Feline Leukemia -Bordetella -Chlamydia Felis Discuss risk factors with your regular full service veterinarian.
Family Owned <u>Indoor or outdoor pet cats (or kittens)</u> that are friendly, who may encounter unvaccinated cats and at high risk for reproducing. This includes Friendly FARM CATS .	Adult cats never vaccinated- give FVRCP now and repeat in 2-4 weeks. Booster again 1 year later and then every 3 years thereafter. In kittens, vaccinate every 2 weeks until 5 months of age. Optional: give 6 month booster if exposed to unvaccinated cats.	Vaccinate with Rabies vaccine at 12-16 weeks of age. Give a Rabies vaccine booster 1 year later and then every 3 years thereafter.	Schedule adults for surgery 2 weeks or more after the 2nd vaccine. Schedule kittens surgery any time after the 2nd vaccine and after they weigh at least 2 pounds. Continue and finish the FVRCP series. 2 FVRCP vaccines required prior to surgery for all cats/kittens.	-Feline Leukemia -Bordetella -Chlamydia Felis Discuss risk factors with your regular full service veterinarian.
Stray or Community Cats (not owned and not pets) Outdoor cats that are feral and afraid of humans and cannot be handled.	Purple Cat will not require FVRCP vaccine in feral cats. Feral cats are afraid of humans. If you can safely vaccinate the cat while in a live-trap, then do so (TNR experts only). We will vaccinate when sedated for surgery.	Purple Cat Vet can give a Rabies vaccine when sedated for surgery.	As soon as possible. No prior vaccines required. However, beware of risk of exposure and subsequent illness from contagious viruses when bringing in unvaccinated cats. These viruses can cause severe illness and sometimes death. These viruses are contagious to your other unvaccinated cats.	-Feline Leukemia -Bordetella -Chlamydia Felis Discuss risk factors with your regular full service veterinarian.
Cats in Animal Shelters and Rescues These cats are at higher than average risk for disease exposure.	Adult cats never vaccinated-give FVRCP within 3 hours of intake and repeat in 2-4 weeks. Booster again 1 year later and then every 3 years thereafter. In kittens, vaccinate within 3 hours of intake and then every 2 weeks until 5 months of age. Start at 4 weeks in bottle babies. Optional: give 6 month booster if exposed to unvaccinated cats.	Vaccinate with Rabies vaccine at 12-16 weeks of age. Give a Rabies vaccine booster 1 year later and then every 3 years thereafter.	For Rescues: Surgery can be done on adult cats and kittens 3 days after the second FVRCP vaccine. Note: kittens must be 8 weeks or older and weigh at least 2 pounds. Continue the FVRCP series. For DATCP licensed Animal Shelters: Surgery can be done 3 days after the first modified-lived FVRCP if vaccinated within 3 hours of intake.	-Feline Leukemia -Bordetella -Chlamydia Felis Discuss risk factors with your regular full service veterinarian.
